Unified things: the future of IoT

Director of IoT Eric Hembree discusses the impact of IoT on B2B Tech Talk.

Imagine a digital world where every piece of technology seamlessly communicates with all other technology. Your morning alarm talks to your window shades, your window shades wake up your thermostat, your thermostat tells your coffee maker to get going. A truly seamless technological existence.

To tell you the truth, we're not that far off from this being a reality. IoT solutions have had to speed up in order to meet demand. Ingram Micro's Director of IoT, [Eric Hembree](#), discusses these advancements on B2B Tech Talk.

He also covers:

- Why the term "Internet of Things" is dying out
- How IoT is impacting businesses particularly in the healthcare, retail and grocery industries
- How Ingram Micro is helping partners implement IoT solutions for their customers

*"I think eventually it will just be assumed that **anything and everything will be connected in some way...** The needs that we predicted for 5 to 10 years out are here and now." — Eric Hembree*

Unified communication

IoT is all about achieving a harmonious environment, whether that be residential or commercial. Things working together to create a seamless experience of, well, life.

2020 is a year of speeding up tech solutions. We depend on technology to make a living, stay connected and to stay healthy. It's going to take a lot of work to build all the connectors needed in order to make life more seamless.

That's where you—our partners—come in.

Bringing IoT to the world

Ingram Micro is working tirelessly to bring you the most advanced IoT solutions, so you can offer these solutions to your customers—the people out in the field.

Industries such as healthcare, retail and grocery need comprehensive IoT solutions to more efficiently serve their customers. You are the connector between Ingram Micro and the rest of the world. You are the ones who can make a difference for potentially millions of people.

By unifying ourselves, we can unify our things, making life better for everyone.
