

How HP and AMD support sustainability

As leaders in the commercial and consumer electronics industry, we're proud to promote sustainable solutions and environmental awareness. That's why we're revamping our manufacturing process to reduce e-waste and increase the amount of recycled materials in our products.

INGRAM^{MICRO}

AMD integrates recycled water in the fabrication of silicon wafers

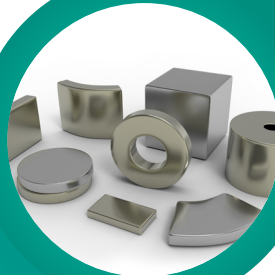

OUR SUSTAINABILITY INITIATIVES

Ocean-bound plastic is collected and reused in HP hardware

HP recycles 1 million plastic bottles per day for use in our products

HP reuses rare-earth metals so they don't end up in landfills

Ryzen up

HP hardware, powered by AMD Ryzen processors, isn't just leading the way in sustainability — we're also leading the industry in performance. No other silicon delivers the performance, power and value of HP's Ryzen-powered PCs and notebooks.
